28	Acceptance & Signature

Overview

SalesIQ is a digital sales and financial intelligence platform designed to help businesses record, organize, and understand the transactions they make in the course of their business.

The primary outcome of the project is to provide the business with a digital sales book that turns every completed business transaction into a professional, traceable financial record. Then it turns those records into meaningful business intelligence.

SalesIQ is designed specifically for businesses that sell through channels such as Instagram, WhatsApp, direct communication, referrals, physical interactions, and other informal sales channels, where transactions may currently be completed via direct payment without a structured digital sales record.

The platform will allow a business owner to record a completed sale, generate a professional invoice for the customer, maintain records of generated invoices to create reports and insights showing how the business is performing over time.

Core Features & Intended Outcomes

- **Sales & Invoice Management**

The platform will allow the business owner to record completed sales by selecting or entering the customer, products, quantities, prices, applicable discounts, applicable VAT/tax, and payment status.

SalesIQ will generate a professional, uniquely identified invoice containing the relevant business, customer, transaction, payment, and financial details, with a digital record for easy reference and tracking.

- **Customer Management**

The platform will maintain a centralized directory of customer records that can be reused across transactions. Essential customer information such as name, phone number, and email address will be stored and linked to the business account on salesIQ.

When an existing customer is identified using their phone number or email address, their saved details can be instantly retrieved and applied when recording a new sale, eliminating the need to re-enter their information.

- **Product Management**

The platform will allow the business owner to create and maintain reusable product records, including product names and relevant sales information.

Products previously recorded in SalesIQ can be searched and selected when creating subsequent sales rather than being manually entered each time.

- **Reports & Business Intelligence**

The platform gives its users daily, weekly, and monthly sales reports. SalesIQ looks at the existing sales records to give a clear snapshot of how the business is doing at a glance, so you don't need extra help or book checking.

*That is where the word **IQ** starts to make sense.*

Project Timeline & Roadmap

We expect to complete and **deliver SalesIQ within 21–25 days** of project commencement, keeping your target features and outcomes on track.

To keep things simple, we'll build SalesIQ progressively from start to finish, adding one piece at a time until the final product is ready for your use.

The planned development journey is as follows:

- **DAY 1 – 4: Getting Started & Public Launch**

SalesIQ has its digital home established and a professional coming-soon page that can serve as the public entry point while the application is being developed.

This stage will include:

- Securing and configuring the SalesIQ domain
- Setting up the hosting environment
- Implementing the approved logo

- Preparing and publishing the SalesIQ coming-soon page
- Establishing the brand typography and initial visual identity
- Preparing the application for the development stages that follow

- **Days 5–9: Account & Business Setup**

A business owner can create and securely access their SalesIQ account and establish the business profile from which their sales records will be managed.

This will include:

- Business owner registration
- Sign-in
- Sign-out
- Account recovery
- Password reset
- Basic business profile setup

• Day 10–14: Product Records & Management

The business begins building its own reusable product records, making future sales faster to record and providing the foundation for product-level sales insights.

Business owners will be able to:

- Add their products
- Provide the relevant product information
- Save products for future use
- View their saved products
- Select existing products when recording future sales

• From Day 11: Client Preview Access

Starting around Day 11, you will receive a secure login link to test the working SalesIQ app firsthand. By then, core features like sign-in, business profile setup, and product recording will be fully functional. As development continues, this same link will automatically update with the remaining features.

Rather than relying solely on descriptions, screenshots, or demonstrations

- **Days 15–18: Sales & Invoice Experience**

Business owners will be able to create a sale by providing the relevant customer and transaction information, selecting products, entering quantities and prices, applying applicable discounts and VAT/tax, and recording the payment status.

Once the sale is recorded, SalesIQ will generate the corresponding invoice. The resulting invoice will be available as a professional PDF that the business owner can download and share with the customer.

- **Days 19–22: Sales & Invoice Experience**

SalesIQ moves beyond simply keeping records and begins delivering its second major purpose

Turning the business's sales records into meaningful information about how the business is performing.

The information captured from sales and invoices will feed the dashboard, giving the business owner insights on what happened in the business.

• Days 23–25: Final Review, Optimization & Launch

The final stage is dedicated to fixing any spotted issues, making quick adjustments, and launching the application.

- Reviewing the complete business owner journey and testing core workflows
- Checking invoice generation, downloads, and business insights
- Fixing any issues found during the review and making final tweaks
- Completing the production setup and launching the app

Project Fee & Payment Structure

The project follows a straightforward web development payment structure designed around defined project phases, rather than complex sprint-based billing.

The total project fee is ₦450,000, payable in two stages

Initial Deposit: ₦300,000

An initial payment of ₦300,000 will be made to formally commence the project.

Upon confirmation of the initial payment, work will begin on the SalesIQ foundation, including the domain, hosting, coming-soon page, branding, and subsequent application development.

Final Balance: ₦150,000

The remaining ₦150,000 will be payable upon completion of the agreed MVP and final delivery.

Completion refers to the delivery of the functionality defined within the agreed project scope as stated in this contract.

Change Management

To ensure that the project remains clear, fair, and manageable for both parties, the development of SalesIQ will be carried out strictly within the scope, core features, and intended outcomes as defined in this agreement.

The purpose of this section is not to restrict reasonable collaboration, but to ensure that both parties have a shared understanding of what is included in the agreed project and how additional requests or changes will be handled.

Agreed Scope

- The Developer will deliver the SalesIQ MVP according to the requirements, features, and intended outcomes described in this agreement.
- The agreed project fee covers the work necessary to deliver those stated requirements.

- Any feature, functionality, service, integration, page, workflow, or other requirement that is not included in the agreed project scope will be considered additional work and will be discussed and priced separately before development begins.
- Neither party should assume that a new idea or feature is automatically included simply because it relates to the SalesIQ product.
- Where additional work is requested, the Developer will communicate the additional cost and, where necessary, the effect on the delivery timeline before proceeding.

This protects the Client from unexpected charges and protects the Developer from being expected to deliver work that was not part of the original agreement.

Revisions & Reasonable Adjustments

The development process is intended to produce the agreed outcome, and it is understood that reasonable adjustments may sometimes be necessary as the product takes shape.

Where a revision is required to bring an existing feature or design in line with the core features and intended outcome already agreed in this contract, such a revision will be considered part of the development process provided that it does not require a significant change to the agreed functionality or the underlying structure of the application.

The Client will be entitled to up to three (3) reasonable rounds of revisions within the agreed project scope.

These revisions are intended for things such as:

- Adjusting an existing feature to better match the intended outcome as agreed.
- Reasonable changes to wording, layout, presentation, or user flow

- 
- Minor adjustments identified during review of the working application

The revision allowance is not intended to cover the introduction of new features or a change to the project's original direction.

For example, asking to tweak how an existing invoice displays information is a minor adjustment.

However, requesting entirely new features such as adding an audit trail or activity log to track every edit made to an invoice constitutes a completely different feature set.

Even though it sits inside the invoice module, it is a separate scope of work and cannot be added midway just because it sounds like a good idea.

Additional Revisions & New Requirements

Once the three (3) included revision rounds have been exhausted, or where a requested change goes beyond a reasonable revision of the agreed scope, the request may be treated as additional work.

Any such work will be separately assessed and billed before it is undertaken. This may include:

- New features not contained in this agreement
- Significant changes to an already approved workflow
- New integrations or external services
- Major changes to the agreed application structure
- Repeated revisions beyond the three included rounds
- Changes resulting from a new business requirement introduced after development has commenced.

The Developer will not proceed with chargeable additional work without first communicating the applicable cost and receiving the Client's approval.

Consolidated Feedback

To keep the project moving efficiently and avoid unnecessary back-and-forth, the Client is encouraged to review each delivered stage carefully and provide consolidated feedback once they gain access to the application.

Where possible, the Client should:

- Review the feature or screen as a whole upon gaining access.
- Take down notes and list all identified changes together.
- Inform the Developer as a whole so the adjustments can be properly planned and corrected.

This allows the Developer to address the requested changes efficiently and helps prevent repeated modifications to the same area of the application.

The purpose of this approach is not to limit communication. Both parties are encouraged to communicate throughout the project; it is simply intended to make that communication clear, organized, and productive.

Fairness & Mutual Responsibility

- Both parties acknowledge that successful delivery requires cooperation.
- The Developer is responsible for delivering the agreed product according to the requirements and intended outcomes stated in this agreement.
- The Client is responsible for providing timely information, decisions, feedback, approvals, and materials reasonably required for the project.
- Where delays in receiving required information, feedback, approvals, or materials from the Client affect the development schedule, the delivery timeline may reasonably be adjusted to reflect the resulting delay.
- Likewise, where the delivered work does not meet the agreed requirements, the Developer will be responsible for addressing the issue within the agreed scope and revision provisions.

Ownership and Control

- **Developer Control:** The SalesIQ MVP will remain under the Developer's complete ownership and control until the agreed project fee has been paid in full. Access provided to the Client during the preview stage does not constitute a transfer of final ownership.
- **Final Transfer:** Upon completion of the agreed MVP and receipt of the remaining balance (₦150,000), 100% ownership of the completed application and project assets specifically created for the Client will be transferred.
- **Post-Transfer Rights:** Once final ownership is transferred, the Developer has no right to make any changes or alterations to the platform on their own. Any future alterations will be strictly under the directives of the Client, and any additional work or upgrades will be treated as a billable service.
- **Third-Party Services:** The Client holds 100% ownership rights to all third-party services and accounts set up or used in the build (such as domain names, hosting accounts, etc.), subject to the terms of their respective providers.

Developer Portfolio & Marketing Rights

The Developer retains the right to reference and showcase the completed SalesIQ project as part of their professional portfolio and marketing activities.

This may include displaying:

- The SalesIQ name
- The SalesIQ logo
- Screenshots of the application's interface
- Images or videos of the application's features
- General descriptions of the project
- The Developer's involvement in designing and developing the platform

Such use is intended solely to demonstrate the Developer's work, experience and expertise.

The Developer will not intentionally disclose confidential business information, private customer information, financial records, passwords, credentials, or other sensitive information belonging to the Client or its users.

Where appropriate, screenshots or demonstrations may be presented in a manner that protects private or confidential information.

Changes After Completion

Following final delivery and transfer of ownership, any new features, enhancements, significant modifications, maintenance, or other development work requested by the Client will constitute a new engagement or separately billable work, unless otherwise agreed in writing.

This ensures that the completion of the agreed MVP provides a clear point at which the original project ends, while still allowing the SalesIQ product to evolve through future development if both parties choose to continue working together.

Refund, Termination & Non-Delivery Policy

Both parties acknowledge that the initial payment is made to enable the Developer to commence and commit resources to the project, while the final payment is tied to the successful completion of the agreed MVP.

The following terms are intended to provide a fair basis for dealing with termination, cancellation, or circumstances where the agreed project cannot be completed.

Client-Initiated Termination

The Client may choose to terminate the engagement before completion.

Where the Client voluntarily terminates the project without a failure or material breach by the Developer, the initial \$300,000 payment will be non-refundable.

This is because the initial payment covers the Developer's commitment to the project, time spent, planning, setup, development work, infrastructure, and other resources committed from the commencement of the engagement.

A sudden change of mind, change in business direction, loss of interest in the project, or decision to discontinue SalesIQ will therefore not constitute grounds for a refund of the initial payment.

The Client will not be required to pay the ₦150,000 completion balance where the project is terminated by the Client before completion.

Developer's Failure to Complete the Agreed Engagement

The Developer is expected to make reasonable and consistent efforts to deliver the agreed SalesIQ MVP within the scope and intended timeline stated in this agreement.

Where the Developer is unable or unwilling to deliver the agreed MVP within the confines of this engagement, and the failure is not caused by:

- 
- Client delays or failure to provide required information or approvals
 - Changes or additions requested by the Client
 - Third-party service or infrastructure failures outside the Developer's reasonable control
 - Circumstances beyond the Developer's reasonable control

The Developer will not be entitled to the \$150,000 completion balance.

The Developer will also be required to provide the Client with the completed work produced up to that point that is reasonably transferable and relevant to the agreed project.

Refund Where the Developer Cannot Deliver

Where the Developer materially fails to deliver the agreed project and the engagement must consequently be terminated due to the Developer's inability to fulfil the agreed scope, the parties will first attempt to resolve the matter by allowing the Developer a reasonable opportunity to complete or correct the outstanding agreed work.

Where the Developer is ultimately unable to do so, the #150,000 completion balance will be cancelled in full.

Where the amount of work completed by the Developer is substantially less than the work reasonably covered by the #300,000 initial payment, the parties will discuss a fair partial refund based on the proportion of the agreed work that remains materially undelivered.

This prevents either party from being unfairly disadvantaged.

The Developer will not be entitled to retain the full initial payment where they have materially failed to perform the work for which that payment was made.

No Refund for Completed or Properly Performed Work

A refund will not be due simply because the Client changes their preference, decides that they no longer want the product, or becomes dissatisfied with a direction that remains consistent with the agreed outcome.

Where the Developer has substantially performed the agreed work and the Client chooses to discontinue the project for reasons unrelated to the Developer's failure to perform, the initial payment remains non-refundable.

Similarly, reasonable revisions required to align the application with the agreed outcome will be handled under the Revision Policy rather than treated as grounds for a refund.

Acceptance & Signature

Shared Commitment: Both parties agree that the purpose of these terms is to create clarity rather than restriction. The Developer commits to delivering what has been agreed, and the Client has a reasonable opportunity to review the work and request necessary adjustments to achieve the agreed outcome.

Additional Requirements: New requirements can still be introduced where desired, but they will be treated transparently as additional work rather than silently expanding the original project. This ensures the engagement remains fair, predictable, and respectful of both parties' time, expectations, and investment.

Binding Engagement and Developer Protection: Upon signing, this engagement is officially frozen within the bounds of this document. Both the Client and the Developer are strictly bound to the confines of this contract, and no unagreed verbal promises or outside terms shall alter its scope unless executed in a formal written amendment.

By signing below, both parties acknowledge that they have read, understood, and agreed to the terms outlined in this Web Application Agreement for the development of SalesIQ, a digital sales and financial intelligence platform designed to help businesses record, organize, and understand the transactions they make in the course of their business.
